Education

National Taiwan University Taiwan
Master, Department of Information Management *2025-09 — Present*

National Central University Taiwan
Bachelor, Department of Information Management (GPA 4/4.3) *2021-09 — 2025-06*

Experience

R&D Intern, Cybersecurity & Cloud Engineering 2026-04 — Present
Trend AI *Taipei, Taiwan*

- Contributed to vulnerability scanning for Linux hosts and network devices in an enterprise network scanner, covering the full workflow from test-environment setup to result verification.
- Provisioned self-hosted VMs and containers to emulate target systems (SUSE, AlmaLinux, network devices), enabling repeatable scan testing.
- Authored YAML scan rules and test definitions for authenticated scans.
- Parsed scanner output in Protocol Buffers (protobuf) format and cross-checked detected package versions against downstream CVE and vendor advisory data to validate detection accuracy and catch false positives/negatives.
- Designed and executed test cases to verify rule correctness, and collaborated with the team through Git-based code review.

Partner (Software Engineering & Product Management) 2025-06 — 2025-08
Sugar.ai (Startup) *Taiwan*

- Built core app interfaces with Flutter, optimizing widget structure and rendering to improve interaction performance.
- Developed web pages and integrated frontend features with backend APIs for reliable, real-time data display.
- Improved development efficiency by refining user flows and reducing UI-related issues.
- Engaged directly with clients to gather requirements and conducted user interviews, translating feedback into product features and priorities.
- Performed competitive analysis of similar products to identify market gaps and inform product positioning and feature roadmap.

Research Collaboration Project 2025-09 — 2026-05
BIG DATA Co., Ltd. *Taiwan*

- Applied FastDetectGPT (zero-shot) to benchmark detection performance across multiple AI models.
- Designed experiments for dataset preparation, scoring, and comparative analysis.
- Analyzed accuracy, false positives, and robustness for real-world text verification.
- Provided insights to enhance the company's AI content detection pipeline.

Projects

Undergraduate Capstone Project 2024-01 — 2025-01
Emotional-Support Platform *Taiwan*

- Built an integrated emotional-support platform using React (frontend) and Spring Boot / Python (backend), incorporating both a LINE chatbot and a web application.
- Designed features for medication reminders and usage tracking to improve communication between users with depressive tendencies and healthcare professionals.
- Developed modules for sentiment analysis, image analysis, and conversation logging, enabling data-driven assessment of users' emotional states.

Skills

- **Programming:** Python, C++, Java, React, Spring Boot, Flutter, Software Engineer (LeetCode: 100+ problems solved with C++)
- **Coursework (scores):** Java Programming (92), Web Programming (93), Database Management (92), Artificial Intelligence and Machine Learning (98), Systems Analysis and Design (97), Programming in Python (89)
- **Languages:** English, Mandarin, German (basic)
- **Awards / Activities:** National Information Service Competition (2024); ATCC Business Case Competition, FarEasTone Division (2023); Garmin Health Award (2023)
